

Restart at the next useful action.

Do not wait for a clean Monday to repair a difficult week.

THE IDEA, AT A GLANCE

Make the restart specific

01 / Choose

One action small enough to do today.

02 / Place

Decide when and where it will happen.

03 / Backup

Plan what you will do if work interrupts.

A planning framework, not a promise that habits form in a fixed number of days.

01 / WHY THIS WORKS

Reviews suggest action and coping plans can help physical activity. Effects vary, and a field experiment found that simple scheduling alone did not reliably increase repeated gym attendance.

THE LIMIT OF THE EVIDENCE

Planning is a tool, not a guarantee. The action must be feasible, and recurring barriers need changes to the environment or programme.

THE LINE TO REMEMBER

You do not need a new start date. You need a next action.

What can you do next?

01 / A meal is next

Eat the next assigned or suitable ordinary meal. Set up tomorrow's lunch before the evening gets busy.

02 / A session is next

Attend the next realistic assigned session. Use an approved shorter option if the normal session does not fit.

03 / Everything feels too much

Pick one achievable action and tell your coach what changed. Simplify the week before adding more tasks.

03 / IN A REAL WORKING WEEK

Illustrative scenario - not a client result

A deadline derails training, meals and check-ins. You feel like waiting until Monday.

Useful move: Today: eat the next normal meal. Tomorrow: attend one realistic session. If a call overruns, use the approved backup slot.

Why: The restart has a place in the diary and an alternative when work intervenes.

04 / USE THIS TODAY

01 / Write: When ___ happens, I will ___ at ___.

02 / Make the backup easier than the original action.

03 / Review the barrier after the action, not before every restart.
