

A missed session is a scheduling problem.

Keep the next useful training stimulus. Drop the urge to repay exercise debt.

THE IDEA, AT A GLANCE

The next-session decision

01 / Missed

One planned session did not happen.

02 / Rebook

Find a genuine slot with recovery between sessions.

03 / Resume

If there is no slot, use the next planned session.

A scheduling framework, not a prediction of muscle loss.

01 / WHY THIS WORKS

Resistance-training adaptations do not disappear overnight. A controlled maintenance study found some adaptations persisted with reduced training, with differences by age and outcome.

THE LIMIT OF THE EVIDENCE

That study does not tell us exactly how many sessions you can skip. This rebooking rule is a coaching application, not a tested protocol.

THE LINE TO REMEMBER

Miss one session. Make one sensible decision. Keep going.

What does the rest of your week actually allow?

01 / A clear spare slot

Move the missed session only if the remaining sessions still have sensible spacing. Avoid doubling the work.

02 / No spare slot

Resume the next assigned session. Record the missed one honestly so your coach can see the pattern.

03 / Pain or illness

Do not squeeze in a catch-up. Stop and seek appropriate advice; return when safe.

03 / IN A REAL WORKING WEEK

Illustrative scenario - not a client result

A hearing runs over on Tuesday. Thursday and Saturday training are still realistic.

Useful move: Keep Thursday and Saturday. Do not turn Wednesday into a rushed catch-up plus Thursday into another hard session.

Why: The plan survives the week without a recovery bottleneck.

04 / USE THIS TODAY

01 / Look at the whole week before moving anything.

02 / Keep the warm-up and prescribed recovery between sessions.

03 / If this happens repeatedly, change the timetable with your coach.

EVIDENCE / ORIGINAL SOURCES
